AI-BERT VIBE CODING · ALBERT SCHOOL

02 · Talk to an agent

la page de S01, refaite en trois itérations ciblées, redéployée, avant/après posté.

How to use this module

Work through it alone, at your own pace, in about an hour. Everything you need is here: the idea, the exact commands, the prompts to copy, and what to do when it breaks. Bring your questions to the weekly help hour. The last section is for the organisers.

The idea

"Make me a beautiful website"

You saw what that produces: a blue hero, three cards, a font you have seen a thousand times. It is not the agent being bad. It is the agent being asked nothing.

The agent knows nothing about you

Not who the page is for, not what it should do, not what "good" means to you, not what it must leave alone. Every one of those gaps gets filled with the most average answer on the internet. A brief closes the gaps in four lines:

- **Who it is for.** A named person, not "users".
- **What it must do.** One job.
- **What done looks like.** Something you can check.
- **What not to touch.** The part you already like.

Ask for the plan before the code

"Tell me what you would change, and do not change anything yet."

Now you correct one sentence instead of a hundred lines. The plan is where you catch "I would also add a contact form" before it exists.

Iterate, never restart

One change per prompt. Name it. End with "do not touch anything else". Then look at exactly that part. Three small iterations beat one big reset every single time, because you keep everything that already worked.

The sequence, on one line

Wish -> brief -> plan -> one change -> one change -> one change.

That sequence is the whole skill. The tools will change every year. This will not.

Prompts for this module

Replace everything between < and > with your own words before you press Enter. The agent takes placeholders literally.

01 The brief

```
Read index.html and styles.css. This page is for <a named person, e.g. a
 recruiter with thirty seconds>. It must <one job, e.g. make them want t
o open my GitHub>. Done means: <three checkable things>. Do not touch <t
he part you already like>. Tell me your plan in five lines and do not ch
ange anything yet.
```

02 First change

```
Do only step <number> of your plan: <name the change>. Do not touch anyt
hing else. When you are done, list the lines you changed.
```

03 Second change

```
Now <one precise change, e.g. make the title readable on a phone screen>
. Do not touch anything else. List the lines you changed.
```

04 Bonus: self-critique

```
Look at the page as if you were the person it is for. Give me five thing
s that would make it better, one line each, most important first. Do not
 change anything.
```

What you build

What you have at 00:57

The same page as last week, rebuilt in exactly three iterations, back online, with the three prompts you used saved in a file.

Where to start

Open a terminal in your step 01 folder, type `claude`. Take a screenshot of the page as it is now: that is your "before".

No step 01 folder? Download the step 01 starter, run its first prompt, then continue here.

Re-upload, when you are done: Cloudflare -> Workers & Pages -> your project -> Deployments -> Create deployment -> drag the folder. Same project, same address.

Constraints

- **Three prompts that change the page, no more.** One brief, then two single changes. Answering the agent's questions or saying "go ahead" does not count. Write the three in a file called `notes.md` in the folder.

- Each change prompt names one thing and ends with "do not touch anything else".
- No new page, no new tool. Same folder, same Cloudflare project, re-upload.

Bonus, if you finish early

Ask the agent to critique its own page in five bullet points, then apply exactly one of them.

If you get stuck

1. **The agent changed things you did not ask for** -> you forgot the last sentence. Undo by asking it to put that part back, then restate the constraint.
2. **The result is generic again** -> your brief has no named person in it. Add one.
3. **It asks you questions** -> answer them. That is the plan step working.
4. Raise your hand.

Done means

Every line is something another person can check without reading your code. Tick them as you go.

- [ ] My first prompt names a person, a job, what done looks like, and what not to touch
- [ ] I rebuilt the page in exactly three prompts, saved in notes.md
- [ ] The page is back online at the same address
- [ ] I posted a before and after screenshot in the club group
- [ ] **Bonus.** I applied one point from the agent's own critique

How it was done

> **Read this after you have tried, not before.**
>
> The value of this module is in the attempt, not in the answer. If you are stuck for more than twenty minutes, read on.

What a good result looks like

Same page, same address, and three visible differences you can name. A `notes.md` with three prompts where the first one has a person, a job, a definition of done and a "leave this alone" line.

A brief that worked in the room

This page is for a recruiter who has thirty seconds. It must make them want to open my GitHub. Done means: my name, one line on what I build, one link, readable on a phone. Do not touch the colours, I like them. Tell me the plan first.

The two mistakes almost everyone made

Asking for three things in one prompt. The agent does all three, badly, and you cannot tell which one broke the page. Split it.

Skipping the plan. "Just do it" is fine when you know exactly what you want. Tonight you did not, and the plan was where you found out.

Why this matters more than the tools

Next year the agent will be different. The brief, the plan and the one-change rule will still be how you get good work out of it.

Pour les organisateurs

Cette dernière partie est en français et ne s'adresse pas aux membres. C'est le conducteur de l'heure d'entraide et la préparation à faire avant.

S02 — Talk to an agent · conducteur

Victoire de fin d'heure : la page de S01, refaite en trois itérations ciblées, redéployée, avant/après posté.

Notion unique : un brief, pas un souhait. Contexte, spec, plan, itération. Pas de nouvel outil ce soir.

Avant la séance

- Ouvrir la séance 2 dans l'admin.
- Avoir sous la main la page S01 de démo et un dossier propre pour la refaire.
- Préparer la capture d'écran « avant » de la démo.

00:00–00:03 · Accueil

« Ce soir vous ne changez pas d'outil, vous changez de façon de lui parler. À 00:60, votre page est trois fois meilleure et vous savez pourquoi. »

00:03–00:08 · L'échec

1. Dans un dossier VIDE préparé la veille, `claude`, prompt : « make me a beautiful website ». Laisser tourner. Résultat générique, hero + trois cartes. La salle reconnaît le template. Si ça dépasse 90 s, basculer sur le résultat pré-généré.
2. Prompt : « make it better ». C'est différent, jamais mieux. Montrer que l'agent a tout réécrit.
3. Question à la salle : qu'est-ce qu'il ne savait pas ?

00:08–00:20 · Le concept, trois affirmations

1. **L'agent ne sait rien de toi.** Pour qui, pour quoi, ce que « bien » veut dire ici. Un brief a quatre lignes : audience, ce que ça doit faire, à quoi ressemble « fini », ce qu'il ne faut pas toucher.
2. **Demande le plan avant le code.** « Dis-moi ce que tu vas changer, ne change rien encore. » Tu corriges une phrase au lieu de corriger cent lignes.
3. **Itère, ne recommence pas.** Un changement par prompt, nommé, avec « ne touche à rien d'autre ». Trois petites itérations battent un grand reset.

Au tableau : SOUHAIT -> BRIEF -> PLAN -> UNE ITÉRATION -> UNE ITÉRATION -> UNE ITÉRATION.

00:20–00:28 · La démo

Reprendre la page S01. Prompt 1 (brief complet), lire le plan renvoyé, valider. Prompt 2 (une itération précise). Prompt 3 (une seconde). Montrer à chaque fois que seule la zone visée a bougé. Ré-uploader sur Cloudflare.

00:28–00:30 · Lancement

Énoncé projeté. Binômes libres. Rappel : les trois prompts vont dans `notes.md`, c'est la partie notée.

00:30–00:57 · Pratique

Piège fréquent : un prompt qui demande trois choses. Faire découper. Deuxième piège : « fais comme tu veux ». À 00:45, deux volontaires.

00:57–01:00 · Vitrine

Avant/après côte à côte. Demander : quel prompt a fait la plus grande différence ?

Après

Déverrouiller le corrigé. RETEX.

Envoyer dans le groupe le devoir « avant la séance 3 » de la page Setup : git, gh, identité git, `gh auth login`. Sans ça la séance 3 dure 45 minutes.
